1 Introduction to T_EXfile types

Hello L^AT_EX learners! This is just a simple example so that I can show you the types of files that are created when L^AT_EX runs.

2 Math examples

You can do math in-line as well as display mode. So here is a bit of math in line: $2x + 3 = 7$. Or you can have Greek letters as well or various types of symbols: μ , δ , Δ , \clubsuit , \diamond , \S , Σ , etc. Or you can have big displayed equations lined up:

$$2x + 3 = 4x - 6$$

$$2x + 9 = 4x$$

$$9 = 2x$$

$$\frac{9}{2} = x.$$
